

## Diversify Your Investments

The main goal of Concrete Dyes is supplementing stains. The more concrete stain that is wanted, the more concrete dye will be needed.

Concrete Dyes add beauty as well as color. When manufacturing concrete dyes, care should be taken to read carefully the msds information.

Our color chart covers only the basic colors. After you have mixed a few, you should be able to modify and make your own.

Concrete Dyes are really quite simple. We want to modify and color the surface while at the same time not to interfere with the chemical process already in place.

Concrete Dyes are made with oxide pigments and Isopropyl Alcohol. Each individual material is serving a purpose.

**Oxide Pigments:** are pure and concentrated and made from metal oxides, recycled from iron and processed for mixing into concrete.
